FLEX-MIGG fasteners: a new twist on an old favorite gives you more design freedom

New VELCRO® Brand FLEX-MIGG Fasteners give you more flexibility to bring distinctive seat designs to life, while simplifying assembly and reducing cost.

Each FLEX-MIGG fastener is a flexible chain of hook segments that is easily positioned to create the contour you need. Diecutting is unnecessary; so is the usual metal insert. Magnetic attraction to the tooling comes from the ferromagnetic resin we use in the hook molding process.

FLEX-MIGG fasteners deliver all the quality and long-term holding power you expect from VELCRO® Brand Fasteners, while eliminating special shapes. Available in widths of 12mm and 15mm, these fourth-generation mold-in fasteners are innovative, cost-effective, and enhance your design freedom. For more details, give us a call.

Typical Tooling

1. Aluminum Pedestal for part placement
2. Rare Earth Magnets (typically 1 row) to attract metal in fastener
3. Ferrous Bar to maximize magnet performance
4. FLEX-MIGG Fastener
